ARE YOUR DUCTS MAKING YOU SICK?

When it comes to the air in your home or office, trust only the best!

Safety King has spent over four decades providing Southeast Michigan with cleaner indoor air, reduced household dust, and energy savings through duct cleaning.

The company was founded by father of six and US Navy veteran Mike Palazzolo Sr. in 1969, and remains family owned and operated today. Mike Sr. is a founding member and past president of the National Air Duct Cleaners Association.

Safety King is Michigan's largest and most experienced air duct cleaning company. They use state-of-the-art monster vacuum trucks to thoroughly clean the interior surfaces of the duct system in your home or business.

"The condition of your ductwork seriously impacts what you're breathing, and the air you breathe has a huge effect on your health," explained Mike Jr. "For people who are sick and have sinus infections all winter, it's quite possibly caused or aggravated by dirty ductwork."

Even the most thorough housekeeping cannot prevent a gradual accumulation of dust, dirt, hair, dead insects and worse on the inside surfaces of the air ducts in your heating

and air conditioning system. "Many times we find construction debris from when the home was built or remodeling projects," Mike Jr. said. "Some of the construction debris we remove are cigarette butts, coffee cups, and discarded food. It can really be eye-opening to the homeowner." "It's kind of gross but skin cells, even past owners', make up lots of the dust."

Beverly T. of Keego Harbor understands this first hand. "I hadn't had my ducts cleaned since my home was built 20 years ago, and Safety King did an amazing and fabulous job. This is absolutely a necessity for all real estate owners,"

"Your heating and cooling system is the most expensive system in your home or office and the largest energy user. It needs to be maintained. Periodically cleaning the duct system is important. That's why hundreds of heating contractors refer their clients to us" Mike explained. "The ductwork is out of sight and out of mind. But it shouldn't be forgotten. You wouldn't skip dusting a bedroom for twenty years, would you? The number one thing we hear from customers is that they can't believe they waited so long to do it and what a remarkable change it made."
